

EXHIBIT D

CASE NAME: United States v. Jiaqiang

FILE NAME:

DATE:

TIME: N/A

PARTICIPANTS: UC
XU JIAQIANG
WAITER

ABBREVIATIONS: [U/I] Unintelligible
[PH] Phonetic spelling

1
2 [Background noises 00:00 – 00:49]

3
4 WAITER: [U/I].

5
6 UC: Oh, thank you. Can I...keep this?

7
8 [Background noises 00:53 - 05:19]

9
10 WAITER: Is anybody joining you [U/I], sir?

11
12 UC: Yeah, somebody will be coming.

13
14 WAITER: Sure.

15
16 UC: Thank you.

17
18 [Background noises 05:23 – 06:31]

19
20 UC: Thank you.

21
22 [Background noises 06:34 – 14:07]

23
24 UC: How you doing?

25
26 JIAQIANG: Good.

27
28 UC: Yeah?

29
30 JIAQIANG: How are you?

31
32 UC: Very good. Little tired, but, you know, I don't sleep very well
33 in hotels. I, I, I don't know why I have such a hard time with
34 it but, and I travel all the time. You'd think by now I would be
35 used to it, but no, I'm still not used to sleeping in a hotel,
36 so....

37
38 JIAQIANG: Oh...[laughter].

39
40 UC: How about you?

41
42 JIAQIANG: Yeah, it's good, but I'm still a little bit jetlagged.

43
44 UC: Oh, I'm sure.

45
46 JIAQIANG: Yeah, so getting up very early this morning.

1
2 UC: Oh, really? What time did you get up?
3
4 JIAQIANG: Five.
5
6 UC: Five o'clock?
7
8 JIAQIANG: Oh, yes. [Laughter].
9
10 UC: So you've been awake since five?
11
12 JIAQIANG: Yeah [laughter].
13
14 UC: Oh, sorry.
15
16 JIAQIANG: Just do, do something.
17
18 UC: Right, right.
19
20 JIAQIANG: This, you know, because there is...
21
22 WAITER: You want something to drink?
23
24 JIAQIANG: ...it's okay, some [U/I]...
25
26 UC: Yeah, yeah.
27
28 JIAQIANG: ...work for you?
29
30 UC: You want coffee?
31
32 JIAQIANG: Okay, sure.
33
34 UC: Or there's tea. Whatever you would like.
35
36 JIAQIANG: Okay. The coffee. Okay. Thank you. Just because there's
37 thirteen hours time difference.
38
39 UC: Thirteen, oh, that's right.
40
41 JIAQIANG: Yeah.
42
43 UC: You're pretty much the complete opposite of us.
44
45 JIAQIANG: Yeah [laughter].
46

1 UC: Oh, my gosh. Well hopefully tonight you can get some
2 sleep. We'll see.
3
4 JIAQIANG: Yeah.
5
6 UC: I don't...
7
8 JIAQIANG: Adj...adjust a little, yes. Or [U/I], it would be okay.
9
10 UC: Right, right. So you, but you used to live here, though, right?
11 For quite some time. You used to live here for a while?
12
13 JIAQIANG: Uh...
14
15 UC: In the States?
16
17 JIAQIANG: Yes. Five years ago.
18
19 UC: Oh, five years ago you lived here.
20
21 JIAQIANG: Yes. I lived, I lived here for more than three years. Just to
22 get a, get a Master's degree.
23
24 UC: Oh, okay.
25
26 JIAQIANG: Yeah. And, and some internships.
27
28 UC: Oh, okay. Where...you were in Maryland, though, right?
29
30 JIAQIANG: In, uh, Delaware.
31
32 UC: Delaware.
33
34 JIAQIANG: Univers...University of Delaware.
35
36 UC: Gotcha, okay. Nice. But you went back, huh?
37
38 JIAQIANG: Yeah.
39
40 UC: I was just, so I was, when I was waiting here, while I was just
41 on CNN.
42
43 JIAQIANG: Oh.
44
45 UC: Did you see this?
46

1 JIAQIANG: Ah, yeah.
2
3 UC: They're actually shutting things down for a few days because
4 it's getting so bad.
5
6 JIAQIANG: Ah, yes, it's kind of, you know, it's kind of, um, normal.
7
8 UC: Is that right?
9
10 JIAQIANG: Yes, because the air pollution in Beijing is, you know, it's not
11 very, it's very strong...
12
13 UC: Yeah.
14
15 JIAQIANG: ...these days, especially in winter.
16
17 UC: Oh, really?
18
19 JIAQIANG: Yeah, and, er, government are doing some restrictions that
20 for to, to the industries...
21
22 UC: Uhm-hm.
23
24 JIAQIANG: ...to limit their...
25
26 UC: The amount on the pollution?
27
28 JIAQIANG: Yes. And also for the household [ph], uh, cars, you know,
29 limit the people to buy cars.
30
31 UC: Oh, is that right?
32
33 JIAQIANG: Yeah.
34
35 UC: They're trying to restrict the amount of cars?
36
37 JIAQIANG: Yes.
38
39 UC: Yeah, I can't get over that. I mean it's a beautiful city and
40 then all of a sudden it's just, like, covered by all this smog.
41
42 JIAQIANG: Yes, so..., but sometimes it's okay.
43
44 UC: Yeah.
45
46 JIAQIANG: You know, when, especially we, we, um, you know, we, we

1 always wait for the w...wait for the wind, you know. When
2 the wind comes...
3
4 UC: Then it cleans it up?
5
6 JIAQIANG: Yes. [Laughter]
7
8 UC: That's...have you been to LA before, Los Angeles?
9
10 JIAQIANG: Oh, no.
11
12 UC: Nah.
13
14 JIAQIANG: Yeah, but I've been to, uh, San Francisco.
15
16 UC: Okay.
17
18 JIAQIANG: Yeah.
19
20 UC: Well, LA's kinda like that, too, with the amount of smog...
21
22 JIAQIANG: Oh.
23
24 UC: ...it gets...it's a little bit too much. But... So, are you living
25 in Beijing now, or, are you on the outskirts of Beijing?
26 Where exactly are you?
27
28 JIAQIANG: Uh, yeah, in Beijing.
29
30 UC: In Beijing.
31
32 JIAQIANG: Yes.
33
34 UC: Do you live alone, or...?
35
36 JIAQIANG: Um, I am currently alone, but I intend to marry, get married...
37
38 UC: Oh, you have a fiancé?
39
40 JIAQIANG: Yeah.
41
42 UC: Oh, that's [U/I]. When you getting married?
43
44 JIAQIANG: Next, next May.
45
46 UC: Oh, next May? Oh, okay. You guys are gonna stay in

1 Beijing, then, or...?
2
3 JIAQIANG: Uh, yes, maybe. [Laughter]
4
5 UC: Depends on what happens, right?
6
7 JIAQIANG: Yes. Are you the co-founder of your company?
8
9 UC: So, um, it's act...actually a good question. So, you know
10 Rog, because I've talked about Rog before...
11
12 JIAQIANG: Yes.
13
14 UC: ...my investor? So, I met up with Rog years ago, and, um,
15 he's actually been funding a lot of my projects, so...
16
17 JIAQIANG: Oooh.
18
19 UC: ...one of the projects that we started was this Armorancap
20 [ph] company, which is, you know, we do a lot of like, pen
21 [ph] testing, we do a lot of, um, cyber security, you know,
22 that's like the threat this day is like cyber security, and you
23 know, the amount of hackers out there. So we, that
24 company primarily deals with that space, but that's just one
25 small project and I'm the lead on that project, but there's,
26 there's, so the actual founder and the co-founder – you're
27 gonna meet later: um, Kim and Lawrence. So that'll be your
28 next meeting, um, so like, that's just one piece of what I do.
29 I have all these other projects. Like, I've been working with
30 Rog for years, and we've, we've had a lot of real good
31 successes, so, I mean, it's been exhausting, cuz I've been
32 travelling a lot doing all these projects, special projects, um,
33 but this is just one more of them, so, it's, it's, it's very
34 lucrative, like it's been doing a really good job – they, they
35 got some, a lot of contracts globally now, um, which is good.
36 So we wanna now start getting this new space, of like big
37 data. I mean that's the new, biggest thing out there, so like,
38 in my mind, you know like, we have a specific need for that
39 in Armorancap, but, you know, knowing that you, like, you
40 have the code, I'm wondering if there's more that we could
41 do even outside of that, so I'm kind of curious about your
42 ideas about that.
43
44 JIAQIANG: [U/I] about the Armorancap company. What, what's its main
45 thing it's for?
46

1 UC: What's that?
2
3 JIAQIANG: I mean, um, what does Armorancap company?
4
5 UC: So, a lot of companies will hire us to come in and do audits.
6 So we'll do audits of their networks to see what's going on,
7 but also now what we're doing is we're building security
8 systems, and part of that is secure, secure storage. So...
9
10 JIAQIANG: Oh, I see.
11
12 UC: ...that's the area that we're moving into now, but large data.
13
14 JIAQIANG: Large.
15
16 UC: Yeah. So, I mean, we've talked a lot already. You know, I
17 already got to know you, we've had a lot of chats, um, you
18 know, this is not an interview. Like, I brought you here cuz I
19 believe, you know, that you're a good person to, kind of, fill
20 this, sort of, need for Armorancap. But also, I mean, the
21 mere fact that you have access to a lot of that code is great,
22 you know what I mean? Cuz that, that's the world we're
23 moving into right now. So, um, right now, I mean I just want
24 to chat with you a little bit more, um, but, you're gonna meet
25 with the folks later on. That's where you're gonna have to,
26 kinda, sell yourself in terms of, like, working on that project,
27 the [U/I] project. So, that's gonna be a little bit later –
28 probably around two o'clock we'll meet with them. Um,
29 they're gonna meet us – we have a suite upstairs that we're
30 gonna meet. And it'll be, uh, Rog will be there, Lawrence will
31 be there and Kim will be there. And they'll, they'll ask you
32 more like, more like interview questions, because, you know,
33 I've been vouching for you all this time saying that, you
34 know, you, we should definitely bring you in. They're gonna
35 come in and actually ask you some, just some more
36 questions, like, kind of about your background. So just, you
37 know, talk about what you've done in the past, who you've
38 worked for, um, the projects that you've worked on, things
39 like that.
40
41 JIAQIANG: Oh, I see.
42
43 UC: So....
44
45 JIAQIANG: Um, I, I got the point. So, um, they are co-founders?
46

1 UC: Yup.
2
3 JIAQIANG: Armorancap company?
4
5 UC: Yeah, yeah. So, it's, it's a very new company, but the reality
6 is there's so much business right now that we, we, we are
7 aggressively pushing to expand more, um, so...
8
9 JIAQIANG: How, how many people are...?
10
11 UC: Well, so, we have, a lot of it's like subcontracted out, so we
12 have, have the founders, co-founders, and then we bring
13 people on with special needs, and then we're starting to fill
14 out the team as we see fit. But like for example, if we get a
15 project, like a government contract, we'll bring in individuals
16 to help do that project. Cuz, you know, so many firms out
17 there that actually offer a lot of these services. So we
18 partner with a lot of them also. So right now, it, it's a small
19 company, but we're starting to expand just because we have
20 to. But what I want to do is I want to start talking to you
21 more, though, like, what else we can do. You know, like,
22 you have, you have, you know, a very unique skill set and,
23 you know, the...this code that you keep talking about, like I
24 want to talk more about that, like, have you done anything
25 with that before? Like, have you used it for anything else?
26
27 JIAQIANG: Hm...yes.
28
29 UC: Like what kind of projects have you worked on? I'm just
30 wondering if there's some things that we could do here, cuz
31 the reality is we already have a lot of these contracts in
32 place.
33
34 JIAQIANG: Uh-huh.
35
36 UC: If we could sell some new services to them, that would be
37 great.
38
39 JIAQIANG: Yes. I, I, I, I understand. But, um, cuz you know something
40 I'm, I did before that is do some kind of, you know, further
41 hyperconverged infrastructures.
42
43 UC: Okay.
44
45 JIAQIANG: That is, you know, build clusters, and, er, build, er, distribute
46 storage over the cluster.

1
2 UC: Clusters in distributed storage?
3
4 JIAQIANG: Yes.
5
6 UC: Okay.
7
8 JIAQIANG: And, er, [U/I] computing over that.
9
10 UC: Hm. Did you do that for a company, or...?
11
12 JIAQIANG: Actually, yes, we, actually, yeah, that is, I tried that in, in my
13 last company.
14
15 UC: What was, company was that?
16
17 JIAQIANG: Uh, it's King Soft [ph] company.
18
19 UC: Oh, King Soft.
20
21 JIAQIANG: Yeah.
22
23 UC: You don't work there anymore?
24
25 JIAQIANG: Yes. Actually, so, I just wanted to talk with you this time, and
26 I also, uh, you know, establish a start-up.
27
28 UC: Oh, you did?
29
30 JIAQIANG: Yes.
31
32 UC: Oh, interesting.
33
34 JIAQIANG: Yes, and, er, um, and, er, some other guys. And we, we
35 also hired from the giants internets in China, and, er, we
36 have a lot of talent people there. And, er, actually we have
37 already got some capital raising.
38
39 UC: Oh, you do?
40
41 JIAQIANG: Yes.
42
43 UC: Capital raising? Is that what you...?
44
45 JIAQIANG: Yeah, yes.
46

1 UC: Uhm-hm.
2
3 JIAQIANG: Um, actually we get, um, transfer to US dollars, about three
4 million.
5
6 UC: Oh, that's good.
7
8 JIAQIANG: Yes.
9
10 UC: That's a good start.
11
12 JIAQIANG: Yes, start.
13
14 UC: Who are those investors?
15
16 JIAQIANG: Um, it's, they're, it's, they're ranked first in China...
17
18 UC: Direct...?
19
20 JIAQIANG: ...in 2015. Yes.
21
22 UC: It's called Direct First?
23
24 JIAQIANG: No, no, no. I mean, it ranked first. I mean the name...
25
26 UC: Oh, ranked first. Gotcha.
27
28 JIAQIANG: Yes. And, er, it's the, the name is Fortune Venture Capital.
29
30 UC: Fortune Venture Capital.
31
32 JIAQIANG: Yes. And it has lot of money and a lot of, uh, companies it
33 in...it invested before.
34
35 UC: Hm.
36
37 JIAQIANG: And some of them have already IPO.
38
39 UC: Oh, okay. Well that's good for you guys.
40
41 JIAQIANG: Yeah, yeah. Yes, and, er, we are trying to do some things,
42 and that's also, um, I think it's a good opportunity for us to
43 collaborate further...
44
45 UC: Uhm-hm.
46

1 JIAQIANG: ...and profoundly.
2
3 UC: Okay, yeah.
4
5 JIAQIANG: It's time with you or with Armorancap company...
6
7 UC: Okay.
8
9 JIAQIANG: Yes.
10
11 UC: Can you, can you tell me a little bit more about what you did
12 with King Soft, then, in terms of the distributed storage?
13 Using that code?
14
15 JIAQIANG: Um, we just, er, no, you know, because we build up the, their
16 storage, storage cluster...
17
18 UC: Uhm-hm.
19
20 JIAQIANG: ...and, er, use, use that to, you know, to, to provide storage
21 to their app [ph] they are running or to machines.
22
23 UC: Oh, I see.
24
25 JIAQIANG: Yes.
26
27 UC: And were you able, did you, were you able to modify some
28 of the code to su..suit their needs? Or did you just use it the
29 way it was? Like, how did you do that?
30
31 JIAQIANG: We modified it.
32
33 UC: Oh, so you brought a team in and they looked at that code,
34 or...?
35
36 JIAQIANG: Yeah, I, I, yeah, I modified a lot.
37
38 UC: You did, or somebody else did?
39
40 JIAQIANG: I did.
41
42 UC: Oh, you did, okay.
43
44 JIAQIANG: Because only I have the code. [Laughter]
45
46 UC: Oh, so you, your, you know that pretty well, though, you like,

1 you understand how all that code...?

2

3 JIAQIANG: I understand, but, you know, but, but if we, we meet further,

4 and you will see the code is, is a huge. It's a giant.

5

6 UC: Is it?

7

8 JIAQIANG: Yeah.

9

10 UC: How big is that code?

11

12 JIAQIANG: Um, it's two thousand million lines of code.

13

14 UC: Is that right?

15

16 JIAQIANG: Yes.

17

18 UC: Oh my god.

19

20 JIAQIANG: So, it's very...because you know, it's accumulated for about

21 twenty years.

22

23 UC: Yeah. I mean...

24

25 JIAQIANG: Back to eighties.

26

27 UC: That'd be hard to recreate that, huh?

28

29 JIAQIANG: Yes. It's a huge, huge project. And it has a lot of fantastic

30 features.

31

32 UC: Mmm.

33

34 JIAQIANG: And we, and I can leverage and do a lot of things. And, er, it

35 is originally set up as storage system for SAN [ph], you

36 know, the share disc [ph] storage system.

37

38 UC: Why don't or...order some breakfast?

39

40 JIAQIANG: [U/I] this one?

41

42 UC: You want a breakfast burrito?

43

44 JIAQIANG: [U/I].

45

46 UC: ...get what you want.

1
2 WAITER: Want the salmon, chorizo, or the beef?
3
4 JIAQIANG: The beef?
5
6 WAITER: Beef? Sure. For you sir?
7
8 UC: I will have your healthy snack.
9
10 WAITER: Healthy snack. [U/I]...more coffee
11
12 UC: Thank you.
13
14 JIAQIANG: Hm...later, um, it, you know, it is used...there is a, there is a
15 company for this, Simplevicity [ph].
16
17 UC: What is it?
18
19 JIAQIANG: Simplevicity. In, in USA.
20
21 UC: Simplevicity?
22
23 JIAQIANG: Yes. It's a company, and it, I, um, I heard about that before,
24 and, it also u, u, utilize to get this code to, to, to start up its
25 company, but later it changes.
26
27 UC: Oh, but they used IBM's GPFS [ph]? Or they created their
28 own altogether?
29
30 JIAQIANG: They, no, they just, they used some RPMs [ph]...
31
32 UC: Oh, I see, gotcha,
33
34 JIAQIANG: ...yes, in the start-up. Later, when it, it got bigger, it just do
35 some changes....
36
37 UC: So, I mean. That took twenty years to write that code?
38
39 JIAQIANG: Yeah.
40
41 UC: I guess they probably modified it over and over again.
42
43 JIAQIANG: Yes.
44
45 UC: Gotcha.
46

1 JIAQIANG: Yeah, the prototype and, er, make it production, about six to
2 seven years.
3
4 UC: Uhm-hm.
5
6 JIAQIANG: And later they do a lot of features, and adv...advanced
7 features, quite a lot of things.
8
9 UC: What did, what kind of customers did, were they targeting
10 when they were writing this?
11
12 JIAQIANG: Uhm, uh, originally, they, they are written for super
13 computers.
14
15 UC: Uhm-hm.
16
17 JIAQIANG: And, er, for meteor systems.
18
19 UC: Meteor?
20
21 JIAQIANG: Yes, meteor.
22
23 UC: Okay.
24
25 JIAQIANG: And, later, um, later it becomes general. A lot of people [U/I]
26 use it [U/I].
27
28 UC: Oh. So, like, for, like, when King Soft built this, like, who was
29 using it? What, what kind of customers would use that
30 system that you built? [To waiter:] Thank you. [To
31 JIAQIANG:] I'm just trying to understand who we might be
32 able to start targeting...
33
34 JIAQIANG: Um, for the cloud computing, it's just one of the, uh, main
35 scenarios you can provide – it's just, er, a public cloud...
36
37 UC: Uhm-hm.
38
39 JIAQIANG: ...you know, there's, they use it online, they ran their virtual
40 machines.
41
42 UC: Uhm-hm.
43
44 JIAQIANG: Yeah.
45
46 UC: I see. Did you, did you guys get to do anything, like, with

1 governments? Cuz we want to move into that market, like,
2 targeting some, like, gover...governments, cuz it seems like
3 there's a need. Were you guys able to do anything with
4 that?
5
6 JIAQIANG: Yes. [U/I]...you know, for the, uh, for the property [ph] cloud,
7 you know, there are all kinds of customers.
8
9 UC: Uhm-hm.
10
11 JIAQIANG: But, um, in terms of the company I start up, um, we are
12 doing private cloud.
13
14 UC: Private cloud.
15
16 JIAQIANG: Yes.
17
18 UC: So what does that mean?
19
20 JIAQIANG: That aims, you know, that is, uh, trying to ex...trying to
21 change, uh, the, trying to change the data centers. And, er,
22 into, into what we call the hyperconverged infrastructure.
23
24 UC: Uhm-hm, yep.
25
26 JIAQIANG: And, er, to provide the cloud computing resources to their,
27 you know, to, to the, to its, for its internal use.
28
29 UC: Oh, I see.
30
31 JIAQIANG: Yeah, so it [U/I] private cloud, maybe it has some sub-
32 branches, or some sub-companies...
33
34 UC: Uhm-hm.
35
36 JIAQIANG: ...for a giant company, so they can use it.
37
38 UC: So this start-up, do you already have clients? Or you still
39 building up your product?
40
41 [30:03]
42
43 JIAQIANG: We have already several customers and we have already do
44 10,000?
45
46 UC: 10,000...

1
2 JIAQIANG: 10,000 RMB [PH] it's about, it's about 200, 200 million
3
4 UC: 200 million what...?
5
6 JIAQIANG: Uh, US dollar. Um...
7
8 UC: That's your revenue?
9
10 JIAQIANG: It's not revenue, but...total income
11
12 UC: Oh, total income?
13
14 JIAQIANG: Yeah.
15
16 UC: So your start-up has that much?
17
18 JIAQIANG: Yeah.
19
20 UC: Oh, I see. So who are your customers then? So who are you
21 targeting?
22
23 JIAQIANG: Um, customers... The first customer is the healthy, uh,
24 bureau, bureau in China.
25
26 UC: Healthy bureau in China?
27
28 JIAQIANG: Yeah.
29
30 UC: Is that like a government agent in China or something?
31
32 JIAQIANG: Yes, gov...,yes, government.
33
34 UC: OK, so you are actually working with some [U/I] on
35 this stuff.
36
37 JIAQIANG: Yes. And, uh, we are doing, you know, rendering two, two
38 data centers to active, active, to active, active, um, backup.
39 And, er, each of their data centers are, you know, provide
40 their private cloud.
41
42 UC: Hmm. So are you considered like the founder of this
43 company Or...
44
45 JIAQIANG: Yes.
46

1 UC: OK. What's the name of it? What do you call it?
2
3 JIAQIANG: Verakeet [ph].
4
5 UC: Do you have like a card or anything like that or no?
6
7 JIAQIANG: Uh, yeah.
8
9 UC: Can I have one?
10
11 JIAQIANG: [Laughter] Sorry.
12
13 UC: No, that's alright.
14
15 JIAQIANG: [U/I].
16
17 UC: Oh OK.
18
19 JIAQIANG: [U/I] started for a while.
20
21 UC: How long as it been?
22
23 JIAQIANG: About, uh, several months.
24
25 UC: Oh, several months.
26
27 JIAQIANG: Uh, yes, but actually it has already passed a round "A"
28 capital raising and it's, is, it's also expanding now.
29
30 UC: Is it? How many employees do you have now?
31
32 JIAQIANG: Right now it's thirty people.
33
34 UC: Hmm.
35
36 JIAQIANG: Yes, full contract.
37
38 UC: After...wow, that's really good that you're able to expand that
39 quickly.
40
41 JIAQIANG: Yes. And, uh, can do a lot of things. Yeah, and...
42
43 UC: But you were able to build that based on some of the code
44 that you had then?
45
46 JIAQIANG: Yes.

1
2 UC: Oh wow, that's great.
3
4 JIAQIANG: Because, you know, it's different. Because for storage
5 systems, one of the most [U/I] thing is, is stable.
6
7 UC: Hmm, right.
8
9 JIAQIANG: Yes, and their performance is another thing but the most
10 important is stable.
11
12 UC: Yeah, you gotta make sure it's up all the time.
13
14 JIAQIANG: Yes. All the time.
15
16 UC: Uptime [ph] is big.
17
18 JIAQIANG: Because they're most online thing. So, um, we have very
19 strict, er, we have very strict, um, rules, into change the
20 code, and, you know. Because if, you know, there are a lot
21 of open source things on website and you can download and
22 a lot of things company people are trying to use. But it's not
23 really for production environment.
24
25 UC: Well that's what I was wondering because I know there's
26 open source versions of GPFS out there and I was just
27 wondering why we don't just go with something like that?
28
29 JIAQIANG: Open source?
30
31 UC: Yeah, open source GPFS.
32
33 JIAQIANG: Uh no, that's not open source, that's just one part of the
34 code is open source.
35
36 UC: Oh it's just a small piece?
37
38 JIAQIANG: That is for..., yes. That is for the GPLs for the [U/I] things,
39 that's, that's open source, but most of the part is not, yeah.
40
41 UC: Hmm.
42
43 JIAQIANG: So, so, that is, you know, that is, so for GPFS, it is very
44 stable.
45
46 UC: Yeah.

1
2 JIAQIANG: Also there are a lot of things we can't optimize. A lot of
3 parameters, thousands of them.
4
5 UC: Hmm, right, to really customize it.
6
7 JIAQIANG: Yes, to customize for several kinds, all kinds of scenarios
8 and yes. So, it needs very high skill. Yes, especially-
9
10 UC: Hm. And you have guys that know that stuff too? They know
11 how to program?
12
13 JIAQIANG: Uh, yes.
14
15 UC: That work with GPFS? So it's not just you that's modifying it.
16 There's other guys that know how to do this?
17
18 JIAQIANG: Uh, there's another guy.
19
20 UC: Oh, one other guy?
21
22 JIAQIANG: Yes, we, er, operate together.
23
24 UC: Hmm.
25
26 JIAQIANG: He's also one of my previous colleagues in IBM.
27
28 UC: Oh, really?
29
30 JIAQIANG: Yeah, he also worked...
31
32 UC: What, what's his name?
33
34 JIAQIANG: Tao Win [ph].
35
36 UC: Oh [laughter].
37
38 JIAQIANG: Yes, he also, he also worked there for several years.
39
40 UC: When you were working, you worked with him there?
41
42 JIAQIANG: Yes.
43
44 UC: Oh, I see.
45
46 JIAQIANG: We are, so we are also together working on GPFS.

1
2 UC: Oh that's perfect. So you guys both know this very well?
3
4 JIAQIANG: Uh, yeah.
5
6 UC: [Laughter] that's good.
7
8 JIAQIANG: So we can do a lot of things there and do them changes, you
9 know, because, because the code path of GPFS is very
10 long. Sometimes...
11
12 UC: The what is, I'm sorry?
13
14 JIAQIANG: The code path.
15
16 UC: Oh, code path? Yeah.
17
18 JIAQIANG: Yes. So we do some, we do some changes of that too but
19 we need to guarantee its integrity and stability and we do
20 some things to, to optimize the performance.
21
22 UC: Oh, OK. So you're constantly modifying this.
23
24 JIAQIANG: Yes. But you know we, we do not touch, we do not change
25 the very, very low level things because that is some, you
26 know, that is
27 something that is not very recommended to do.
28
29 UC: Uhm-hm.
30
31 JIAQIANG: Yes, just we, we do some optimizations globally and uh, and
32 uh, we need to, and we, and we just shorten some of the
33 code there.
34
35 UC: Oh.
36
37 JIAQIANG: Because some of the code are useless, especially for
38 example we are doing, doing cloud computing...
39
40 UC: Uhm-hm.
41
42 JIAQIANG: It's useless for this scenario, it's, it's written for some other
43 scenarios...
44
45 UC: Oh.
46

1 JIAQIANG: So we try to shorten the code.
2
3 UC: So you'll just modify it for whatever purpose you need it so
4 you're not in the full blown package?
5
6 JIAQIANG: Yes.
7
8 UC: So would you, do you essentially manage it or would you
9 like, do you modify the code and do an instillation for a
10 specific customer and then that's an environment just for
11 them? Or do you guys have your own data center where you
12 manage this all this yourself? Like is there multiple instances
13 [ph] out there for each customer or...
14
15 JIAQIANG: [U/I] we install for each customer.
16
17 UC: For each customer? Oh ok.
18
19 JIAQIANG: Yes. [U/I] Actually we, actually we modify all the things just
20 you know so people cannot, cannot see, see out of their, you
21 know cannot, uh, cannot guess what it is, just uh, you know,
22 we change all the commands.
23
24 UC: Oh you change it...
25
26 JIAQIANG: Yeah.
27
28 UC: ...so it doesn't look like IBM.
29
30 JIAQIANG: [laughter] yeah.
31
32 UC: Probably a good idea, right?
33
34 JIAQIANG: Because, you know, it's start-up, just you know, you need to,
35 you know, we don't have too many, too much time to, you
36 know, to, because we just need to survive.
37
38 UC: Right I hear you.
39
40 JIAQIANG: [Laughter]
41
42 UC: Right.
43
44 JIAQIANG: Yes and...
45
46 UC: Like, what do you think would happen, like if IBM found out

1 that you were using that?
2
3 JIAQIANG: Um... Truly, truly I think in China it's kind of different.
4
5 UC: Is it? I don't know, I've never been there.
6
7 JIAQIANG: Yes, it's kind of different, no one cares, concerned about
8 that.
9
10 UC: They don't care about that?
11
12 JIAQIANG: [Laughter] Yeah, they don't care about that, and, uh, actually
13 but in US it's quite different.
14
15 UC: Yeah.
16
17 JIAQIANG: Yes, and, but, but...
18
19 UC: Like if it was like here in the US...
20
21 JIAQIANG: But, but, but, because I just mentioned Simplevicity [ph] they
22 also do that kind of things before.
23
24 UC: What is it?
25
26 JIAQIANG: I just mentioned the Simplevicity.
27
28 UC: Oh, Simple...
29
30 JIAQIANG: Yeah.
31
32 UC: They did it?
33
34 JIAQIANG: Yeah, they did that.
35
36 UC: Hmm. And they're...
37
38 JIAQIANG: But, but I, I come out an idea is that, you know, because I
39 think, for example, when you use it and you just direct use it
40 you, for example, you use it and no matter you use in source
41 code version or in RPM you just use it. And if IBM found that
42 in...production with other things, you just buy the license.
43 But at that time I think your company has, has become big
44 to, to, to make IBM notice you.
45
46 UC: Oh. Is it expense, like if you were to buy this?

1
2 JIAQIANG: I don't think, a lot of people, you know, just, a lot of people
3 just buy one license and use for a lot of things.
4

5 UC: But like, like twenty years of a development, like I how much
6 do you think something like that would be worth? Do you
7 think...
8

9 JIAQIANG: It's not very expensive. And especially, it's...
10

11 UC: Well, I mean to buy a license. But I mean if you think about
12 the amount of development time, like, I'm just the way I'm,
13 the reason I'm asking is because if I had to like sell to my
14 people that we were going to write this ourselves, I want to
15 be able to say listen, I can't bring in developers to write this.
16 It took IBM twenty years to do this. It would cost me x
17 amount of dollars. Like what would you think, how much do
18 you think that would be for us do something like that? To
19 bring in developers and start from ground, up and do it?
20

21 JIAQIANG: [Laughter] Uh...
22

23 UC: Like how much time, people, all of that?
24

25 JIAQIANG: So it depends on what kind of things you want to do and uh
26 how much things, how many things you want to change.
27

28 UC: Right.
29

30 JIAQIANG: It's, it's a challenge and it's, it's, um, in terms of money for
31 years working on that, it's quite complicated.
32

33 UC: Is it?
34

35 JIAQIANG: It's very complicated and it has very high skills and uh, you
36 need to, you need to know a lot of things, it has a lot of
37 prerequisites, so that's the reason why, uh, that's the reason
38 why, you know, you need to hire some very skilled people to
39 do it.
40

41 UC: Uhm-hm. Like how many people were working with you at
42 the time you guys were doing this? Was it a lot?
43

44 JIAQIANG: Um, not many people. Globally there was thirty to forty
45 developers.
46

1 UC: Working on that alone? Yeah, I mean that's unrealistic.
2 There's no way I can hire that many people to build
3 something like this from the ground up.
4
5 JIAQIANG: But you, but you know, in terms of code I think it's not too
6 many people, you know, globally do it. Because there are
7 too many things to do inside and uh, and uh, and IBM also
8 has, the GPFS all have very high, like higher standard.
9
10 UC: Uhm-hm.
11
12 JIAQIANG: Especially to, because the code is very hard to understand.
13
14 UC: Gotcha.
15
16 JIAQIANG: Yes, so that's, that's the difficult thing.
17
18 UC: So let me ask you though, so...
19
20 JIAQIANG: But...
21
22 UC: Well I just wanted to understand so like you were saying, like
23 in China it's a different environment than here, like if you
24 were to, and you were saying the simp-, simplicity?
25
26 JIAQIANG: Simplevicity.
27
28 UC: Simplevicity, gotcha.
29
30 JIAQIANG: [Laughter].
31
32 UC: Like would I would be concerned is like I would like to do this
33 and use it but what I would, what I-, like you said, it's a little
34 bit more strict here in the United States, so I just would want
35 to make sure that I'm not gonna get in trouble. So like, how
36 could you modify that so that, it sounds like you guys already
37 sorta did that, so you changed the commands and all that so
38 it doesn't look like its theirs. Like, what would you do to
39 actually modify it so it doesn't look like its IBM's when I use it
40 here so I don't get in trouble.
41
42 JIAQIANG: You know, but, I mean, I mean it's not very easy to, to, you
43 know, to realize this, the GPFS but it's not, it's not
44 impossible...
45
46 UC: Right.

1
2 JIAQIANG: ...because you can, because I, you cannot change, because
3 if you want to change it completely you need to change all of
4 the symbols and all of the function names and a lot of things.
5 Because, otherwise, you know, IBM always, if, if they notice
6 you and, uh, they heard something, and specifically, try to
7 look at their product that they find. They have ways to find
8 out, to find it out.
9
10 UC: Oh, they do?
11
12 JIAQIANG: Because there are lot of things they can do but actually, um,
13 but we, what we did is just to change the cover a little.
14
15 UC: The like, the interface, or...?
16
17 JIAQIANG: Um, the, uh, the commands.
18
19 UC: Oh the commands.
20
21 JIAQIANG: Yeah, the commands. That's the one of the very first thing to
22 do and but also, you know we do some internal things to, to
23 do optimizations and to do some, also some, there is some
24 bugs inside, you know. Even IBM did not notice that.
25
26 UC: Cool.
27
28 JIAQIANG: But, but that's not, but I think that's not a thing, um, if so if,
29 uh, used in US I think it would be probably better just to use
30 it.
31
32 UC: What, what do you mean? [To WAITER] It's really good,
33 thank you... take up all the space here, sorry. You have
34 room?... [To JIAQIANG] So what do you mean we, we
35 would just use it?
36
37 JIAQIANG: Um, I just suggesting just, uh, you know, you just use it. And
38 a lot of people in, in world, in the world use it. You know, I
39 heard a lot of people are using it directly. They even don't,
40 you know, don't buy license.
41
42 UC: But where would they get it from? How would they get that
43 though? I don't understand.
44
45 JIAQIANG: They just use the RPM version.
46

1 UC: The what version?
2
3 JIAQIANG: R, RPM.
4
5 UC: Oh, RPM. Oh, I see.
6
7 JIAQIANG: Yeah.
8
9 UC: But like you're not doing that though. You actually have the
10 full blown, which is good.
11
12 JIAQIANG: Yes, yes, so and they, they just, they can tell them not to
13 change it. And just, uh use it directly and uh read some of
14 the [U/I] online and try to install it. What they can do is to
15 install it and do some small, uh changes, of their parameters.
16 Yes.
17
18 UC: I guess, so if we, if we were to use the full blown version of
19 This, um, that you have. You know when we looked at that
20 server that you put in our, thank you for doing that, that was
21 good because we could actually kinda see it in there and
22 how the install happened, but there were lots of artifacts that
23 actually said IBM on there, like...
24
25 JIAQIANG: Yes, that's the...
26
27 UC: How do you get rid of that?
28
29 JIAQIANG: Because yes, uh, we need to change, you need to do
30 something to, you know, some scripts.
31
32 UC: You can do some scripts that would clean that up?
33
34 JIAQIANG: Yeah, to clean that up and, uh, but also you need to have
35 all of the code because you need to recompile all of the
36 things.
37
38 UC: Oh, that makes sense.
39
40 JIAQIANG: Yes.
41
42 UC: Yeah, I just, I mean the other day I, like you I just want to get
43 these start-ups up and running, I just don't want to get in
44 trouble. Like you know [laughter]. And here in the States, it's
45 a little bit more strict than in China, so...
46

1 JIAQIANG: Yes, that's the thing. But you know, but, I don't think you are,
2 if you are trying directly use it as starter system, it's, it
3 might be, you know, have some trouble. But if you put, put
4 some other thing, for example, some big data or something
5 together with it, as a whole product, I mean...
6
7 [45:08]
8
9 UC: Gotcha. That's good so your company's doing well then,
10 huh? How many...you guys have a lot clients already?
11
12 JIAQIANG: Yes, we're expanding.
13
14 UC: Are you the salesperson, too? Are you the one that goes out
15 and does the sales?
16
17 JIAQIANG: No, no, no.
18
19 UC: Oh.
20
21 JIAQIANG: I still focus on the technical part.
22
23 UC: Gotcha.
24
25 JIAQIANG: And we have, and we have a co-founder has background...
26
27 UC: Want some coffee?
28
29 JIAQIANG: ...we have a co-founder. He has some resources,
30 government resources.
31
32 UC: Oh he has government resources?
33
34 Yes.
35
36 JIAQIANG: Wow. That's good.
37
38 So he is the big sales....
39
40 UC: So have you been able to get some government contracts
41 then through that?
42
43 JIAQIANG: Yes. And some enterprises, governments, and some...
44
45 UC: What was that first thing, enprise? I didn't hear you.
46 You were saying, enprises? What was that?

1
2 JIAQIANG: Um, no he, he's, um, he's the co-founder.
3
4 UC: Right.
5
6 JIAQIANG: Yeah, and, er, he, um, has some resources...and, um, his
7 [U/I] manage the sales team in the start-up...And, er, um, I
8 think the first...our first contract is from the Healthy Bureau.
9
10 UC: Right.
11
12 JIAQIANG: Yeah, that is from his resource.
13
14 UC: Oh so he had those connections.
15
16 JIAQIANG: Yes. He has connections, and, er....
17
18 UC: Oh that's good. That's the only way to do it, you know, is to
19 have those pre-established connections and leverage them.
20
21 JIAQIANG: Yes.
22
23 UC: Does he have other connections too? Or you're just kind of
24 doing cold calls?
25
26 JIAQIANG: Umm, has a lot of connections. [U/I] and, uh, um, we also
27 do some...also have some customers for the college,
28 colleges.
29
30 UC: Oh, colleges?
31
32 JIAQIANG: Yes.
33
34 UC: Oh, okay. Which schools are you working with?
35
36 JIAQIANG: A lot. You know, we spend...we have already installed the
37 system in about, about, uh, forty colleges. Yeah.
38
39 UC: Ok.
40
41 JIAQIANG: And some of them are just, because maybe they need some
42 trial, you know, before, before they sign on.
43
44 UC: Oh, so you gotta do some demos for them?
45
46 JIAQIANG: Um, no, they just try to put the data in the system and try it.

1
2 UC: Oh, I see.
3
4 JIAQIANG: And for 3 months, for example...
5
6 UC: To see if that's what they want?
7
8 JIAQIANG: Yes, to see whether it is stable. And whether it can work,
9 and after 3 months...
10
11 UC: Oh, okay.
12
13 JIAQIANG: ...they will decide whether to, to buy it or not.
14
15 UC: I see. Did you have to that with the Health Bureau too? Or
16 did you just give them...did they already sign up a contract
17 with you?
18
19 JIAQIANG: Um, because we have license already.
20
21 UC: What's that?
22
23 JIAQIANG: We have license. We have very strict license over their
24 system. After 3 months, if they don't want to buy it...
25
26 UC: Oh, I see. So you guys modify that code and then you
27 license it out to them, and they just buy the license?
28
29 JIAQIANG: Yes.
30
31 UC: Oh, I see...
32
33 JIAQIANG: Actually...[U/I].
34
35 UC: I got to imagine that's a lot of work. I mean, university
36 systems alone, I'm sure they're very demanding.
37
38 JIAQIANG: Yeah.
39
40 UC: The health bureau is probably very demanding.
41
42 JIAQIANG: Yes. Because they know a lot of things.
43
44 UC: What does the Health Bureau do? Are they, are they like a
45 governing organization for like health care or...?
46

1 JIAQIANG: Yes...all, all the things regulate health in China now.
2
3 UC: So that's like really sensitive data too that you're putting in
4 there now.
5
6 JIAQIANG: Yes, yes.
7
8 UC: Like private info. So you got to be very careful that doesn't
9 leak.
10
11 JIAQIANG: Yes, that's the reason why...we have two data centers.
12 They want to back up, you know, all of the data.
13
14 UC: Uhm-hm.
15
16 JIAQIANG: Yeah. But that's also demonstrated the stability of the, of the
17 system, because it has run for actually, it has run for more
18 than half of a year now.
19
20 UC: Is that right?
21
22 JIAQIANG: Yes, it's very stable.
23
24 UC: But, I thought you said you guys started up like a few months
25 back.
26
27 JIAQIANG: Ya, but we, you know, we just started test...you know we
28 just first install it, and have some try...and we just, we just
29 start up the company.
30
31 UC: Oh, so you had developed it a while ago, but then you just
32 started the company.
33
34 JIAQIANG: Yes.
35
36 UC: Got you, I see.
37
38 JIAQIANG: Because we just want to see whether it can work, this
39 kind of thing can work.... We can get contracts...
40
41 UC: Right.
42
43 JIAQIANG: ...and we just start up.
44
45 UC: So what I don't want to do today is when we go to this
46 meeting, I don't want to talk money with them. We can talk

1 about that now, but they're really more, cause like, at the
2 end of the day Rog is the one that funds all this, so um, um,
3 we can chat about that before. And then really it's just you to
4 sell yourself to them, like kind of like what you can offer. Talk
5 about this company of yours because we may be able to,
6 rather than recreate it, we can just leverage your company
7 instead. So in terms of, like, compensation, um, I mean I
8 look at this as like...having code of this nature that we don't
9 have to recreate, I mean that saves us a ton of money, you
10 know, and like I want you to think through exactly like how
11 you'd want to be compensated, you know to work with us.
12 Because at the end of day like, you got to make sure you're
13 taking care of yourself, so...um like what do you, what would
14 you value that at? And like how would you want to be
15 compensated? Would you want like a steady salary? Would
16 you want like a bonus?
17
18 JIAQIANG: [Laughter]. I, I need to think about this.
19
20 UC: I know, I know it's an awkward conver...or nobody wants to
21 talk about money, but, um....
22
23 JIAQIANG: Yeah.
24
25 UC: ...I want you to think it through, and like I want you to be
26 realistic too because you know again Rog is funding a lot of
27 these projects we've had in the past and he sees the value
28 in all this, but I just want to make sure that I go to him and he
29 understands what he's getting himself into.
30
31 JIAQIANG: So, so we just talk personally.
32
33 UC: Yeah please.
34
35 JIAQIANG: So, they...they do want to buy the code or...?
36
37 UC: Well, I think it would be multi-part. I think we'd want to buy it
38 and then we would want you to help us or your company
39 help us implement it.
40
41 JIAQIANG: Because you know, yes. Because you know...Actually the,
42 the code itself is useless if you, if, if you are not working for
43 several years...
44
45 UC: Well, we can't do anything with it. That's why we need you.
46 [Laughter].

1
2 JIAQIANG: [Laughter].
3
4 UC: But on the same token, like, us...I'd assume you'd want to
5 be compensated because of the value that you're bringing,
6 which is that code
7
8 JIAQIANG: [Laughter]
9
10 UC: ...right? I mean you're not in this for, you know, volunteering
11 are you? [Laughter]... You can think about it, you don't have
12 to, like, answer me right this minute. I just want you to start
13 thinking about this because...
14
15 JIAQIANG: But, do we think I need to share with some, you know, all the
16 teams?
17
18 UC: What's that?
19
20 JIAQIANG: I mean, do you think I need to share all of the code with all
21 the people?
22
23 UC: No, I, I, I'd want to know from you, like, what we would need
24 to do to sort of protect that. Like what you would be
25 comfortable with, what you wouldn't be comfortable with.
26 Like...
27
28 JIAQIANG: Because...
29
30 UC: ...because they're not going to be able to do anything with it
31 anyway. It would have to be your team. But we would have
32 to essentially buy whatever you make us, right, at the end of
33 the day?
34
35 JIAQIANG: I, I, I got your point. We can just...we just started up and, er,
36 start-up, I think, but because at the beginning we are just a
37 little bit conservative.
38
39 UC: Oh okay.
40
41 JIAQIANG: Yes.
42
43 UC: What does that mean though?
44
45 JIAQIANG: Um, I cannot propagate the code. A lot of people...if, if
46 people, you know, for example IBM, find this, you know, it's

1 very dangerous.
2
3 UC: Oh, it is.
4
5 JIAQIANG: Because people I propagate the data for. I have all of the
6 source code.
7
8 UC: Oh.
9
10 JIAQIANG: Because, you know, I propagate to some people. And some
11 people go to some other people, you know, it's....
12
13 UC: Oh I see what you're saying. You're concerned about it
14 being further distributed.
15
16 JIAQIANG: Yes, that's, that's, that's the thing [U/I]. And also, I think it's
17 useless if, if, if they do not work over it and it do not know,
18 they do not know their int...internal principles of the code.
19
20 UC: Right.
21
22 JIAQIANG: Yeah, it's also useless for them.
23
24 UC: Right.
25
26 JIAQIANG: Yes, so...hm...so that's a...yeah.
27
28 UC: So what, I mean, what would you propose instead of, like,
29 how would this work then? Because you, you clearly have to
30 make something very specific for our needs, so how would
31 that work?
32
33 JIAQIANG: I'm sorry...?
34
35 UC: So, if you, if we were to basically, um, work with you and
36 leverage this code for our own special projects, like how
37 would that work then? Like, I don't, like would we get our
38 own instants? Would we, would you compile it and you
39 would install it in our system? What are you thinking?
40
41 JIAQIANG: Hm...because every time, you know...Last time, I, I, I gave
42 you, I installed the thing...
43
44 UC: Right.
45
46 JIAQIANG: ...in system. I also recompiled it. Yeah.

1
2 UC: So you compiled everything?
3
4 JIAQIANG: Yeah, yeah, recompiled the system. And, er, although it has
5 a lot of...Because I, because I did not change it at the locals,
6 or the phones [ph] last time when we, when we install it...
7
8 UC: Uhm-hm.
9
10 JIAQIANG: ...you can still see a lot of IBM things.
11
12 UC: That's not going to work, we got to take that out.
13
14 JIAQIANG: Because, because you know, I just want...
15
16 UC: It's just a test right?
17
18 JIAQIANG: Um, no...I just want to use it, uh, make it...originally.
19 Because if I, because if I change it and I propagate, it's kind
20 of different then. If I do not change it, and I, I use it, that's,
21 that's, you know, just to use it. It's, it's, it's not, you know, it's
22 normal.
23
24 UC: What do you mean it's normal?
25
26 JIAQIANG: Because you know, like, Simplevicity also use it.
27
28 UC: Oh.
29
30 JIAQIANG: They also grow its, grow up its company.
31
32 UC: Right.
33
34 JIAQIANG: It has become big now.
35
36 UC: Right, right.
37
38 JIAQIANG: Yeah, yeah.
39
40 UC: But, I mean, like you were saying before, you know, like here
41 in the United States, you know, like, I mean it is IBM's code
42 though right? I mean so like, we don't have permission to
43 use it, per se, so, like, we don't, I didn't buy a license from
44 them, so it would have to be changed in some fashion right?
45
46 JIAQIANG: Okay, so....

1
2 UC: Even if you did, even if you did an install, like it's still theirs,
3 right? Wouldn't I get in trouble if I just used their code?
4
5 JIAQIANG: You, you just use their...for example, it just seems like...let's
6 discuss it. For example, let's just make it like you are using
7 the RPMs.
8
9 UC: But we would use the full thing.
10
11 JIAQIANG: No, a lot of people have their RPMs.
12
13 UC: RPM. And you download those from the site?
14
15 JIAQIANG: Uh, no. If you, I can tell you. Some people, you know, buy it.
16 Buy, buy license, buy one license, very small license from,
17 from IBM, and they distribute RPMs to other people. That's,
18 that's one thing. So, so a lot of people have the IBM's...
19
20 UC: Gotcha.
21
22 JIAQIANG: Yeah, but, but, you know, if, um, another thing is...if we
23 change it and we recompile it and make, make it appear
24 totally, um, not totally, just appear slightly, a different thing
25 and redistribute it...and, er, and, er, if for example IBM find
26 it, they know that some people who had all the code, only
27 some people who have all the code can do it because you
28 change all of the things.
29
30 UC: Okay.
31
32 JIAQIANG: Just two aspects, yeah...So maybe we need to consider
33 how, how we can do it.
34
35 UC: So what are your, what are your ideas then?
36
37 JIAQIANG: Hm...my idea, my idea is that, for example, from start up we
38 can, from starting point we can just use it because, um, no
39 one notice, notice you because you are small. For example
40 your company is small.
41
42 UC: So it's small enough where there's not a lot of visibility. Like
43 not enough people...nobody would see it, is that what you're
44 saying?
45
46 JIAQIANG: Yes because, yeah. IBM is a giant, they have no time to

1 notice all the people, all the companies, small companies...
2
3 UC: Right.
4
5 JIAQIANG: ...right? But that's also their strategy for Simplevicity. They
6 just use it when they are growing up...
7
8 UC: Uhm-hm.
9
10 JIAQIANG: ...and later, they...but during that stage, they're also doing
11 some changes or development of their own, their own
12 systems.
13
14 UC: Uhm-hm.
15
16 JIAQIANG: And later, they change it totally.
17
18 UC: Gotcha.
19
20 JIAQIANG: Yeah, that's, that's what they do.
21
22 UC: So you're just saying, since we're small enough, use it as is.
23 But what happens if we start growing?
24
25 JIAQIANG: So I think at this stage, during this stage we can do some
26 things, no matter whether we change it completely or we, or
27 we try to restart, rebuild another system.
28
29 UC: Right...that would be a huge effort...
30
31 JIAQIANG: Um...
32
33 UC: ...to duplicate what they've done, though, right?
34
35 JIAQIANG: No, we don't need to duplicate what because, you know, for
36 GPFS is gen...generic thing for all kind of things so that's the
37 reason why it is, it's huge...
38
39 UC: Uhm-hm.
40
41 JIAQIANG: ...it's giant...
42
43 UC: Uhm-hm.
44
45 JIAQIANG: ...but, but if, but if we already have some customers and we
46 have some specific scenarios and we did, did that, for that

1 kind of customers...

2

3 UC: Right.

4

5 JIAQIANG:no matter whether it is media or cl...cloud computing, and
6 it has its own sui...suitable things. That's not...

7

8 [59:44]

9

10 UC: I see. Okay well we can talk about that more as we, like,
11 start building this out. Um, I guess I'd have to talk to the
12 team as to how we'd want to move forward. Whether or not
13 we would want to leverage your start-up or if we'd want to do
14 something independent of it, it really is what you'd be
15 comfortable with...um, let's say though, for example, we,
16 um, let's say we do some..., would you, first of all, would you
17 be willing to do something independently of the company
18 with us? Is that something you'd be interested in, or you
19 want to use your company?

20

21 JIAQIANG: I think it's okay, we can...

22

23 UC: Just between us?

24

25 JIAQIANG: Um, it's okay, the form [ph] is, is okay, you know, because,
26 hm, we can collaborate, hm, any form is, is okay for me, yes.

27

28 UC: So it would be okay if we, like, we just worked together?
29 Or...

30

31 JIAQIANG: We the team or the company or, just we, just we...?

32

33 UC: You and I, okay?

34

35 JIAQIANG: Yeah, it's okay.

36

37 UC: So, and I guess that's where we have a lot of legwork to do.
38 Um, we gotta figure out exactly what we would have to build
39 here, because you have a lot of contacts in China, which is
40 giving you these contracts.

41

42 JIAQIANG: Yes.

43

44 UC: I have a lot of co..., Rog, specifically, has a lot of contacts
45 here in the States, where I could foresee this growing. But
46 we gotta move quickly, you know, and I don't wanna have to

1 rebuild all this code, like, I'd want a nice robust system...
2
3 JIAQIANG: Yes.
4
5 UC: ...that we could market to lots of people.
6
7 JIAQIANG: Yes.
8
9 UC: So, how would you, how would we do that? What if we
10 wanted to recreate basically what you're doing there, here?
11
12 JIAQIANG: Hm...yes. I think...yes, we can, but it depends on...[U/I]
13 market and what kind of resources we have in, in the States.
14
15 UC: Uhm-hm.
16
17 JIAQIANG: And, er, for example if people have their private cloud
18 computing demands...
19
20 UC: Uhm-hm.
21
22 JIAQIANG: ...and we can just recreate what I did in China here.
23
24 UC: Oh, I see...
25
26 JIAQIANG: And just, er, just, uh, if, equi...equivalent things...
27
28 UC: You would have to tell me exactly what we, what you would
29 need. I don't think it's gonna be an issue, because the
30 reality is: you have a proven model. You've done this
31 already in China.
32
33 JIAQIANG: Yes.
34
35 UC: So, I could go to Rog and be like, listen, he's done this
36 already with his start-up company. They already have
37 customers in [U/I]. They've already done a lot of
38 development on this code. We could basically mirror that
39 here, and then we can leverage all of our contacts here to
40 basically do what you're doing there.
41
42 JIAQIANG: Yes.
43
44 UC: Does that seem realistic, or is that, like, not what you're
45 thinking of?
46

1 JIAQIANG: Yes, I think, think, yes, that's what I think, is because, um,
2 because the whole thing is kind of the same here and
3 there...
4
5 UC: Uhm-hm.
6
7 JIAQIANG: ...and it's easier to manage and I some..., I update or
8 upgrade something there or, or I did something there, I can
9 apply it back to...[U/I].
10
11 UC: So, would we need to involve your other partner, then? Or
12 would it just be you then?
13
14 JIAQIANG: It's okay [U/I]. Yeah I, I will have a team and some co-
15 members who can work together...
16
17 UC: Okay.
18
19 JIAQIANG: ...yeah, and, er, and also my coll..., because some..., the
20 guys in my, in my start-up, they also know, know my trip
21 here.
22
23 UC: Oh, I see.
24
25 JIAQIANG: Yes, so it...they want just we can have some collaborations
26 together.
27
28 UC: And there's no concern with your investors there doing
29 something similar here, do you think? Would, would be
30 issues? Like somebody's already invested...
31
32 JIAQIANG: No, no, you know...the invest...the investors, they
33 recommend us to do this, you know, because, they just want
34 me, us to, you know, to, to, to grow the company, and, er, it's
35 kind of like we are growing the company to the US, just
36 maybe further, later we set, set a branch here, something
37 like this.
38
39 UC: Well, so, I mean, who's the investor again? What did you
40 say their name was?
41
42 JIAQIANG: For...Fortune Venture.
43
44 UC: Oh, Fortune Venture.
45
46 JIAQIANG: Yes.

1
2 UC: And they're located in Beijing?
3
4 JIAQIANG: Um...in Xinjiang [ph]. An...another big city in China, and
5 they have a lot of branches...
6
7 UC: Oh.
8
9 JIAQIANG: ...yeah, in China, and globally.
10
11 UC: Okay. Okay, and I guess we can talk about those when we
12 move forward, but, so, I mean, again, we're, we have this
13 whole project with Armorancap. That's something
14 completely separate. But I'm just trying to think of like what
15 we could do, you and I, like, in a business here basically
16 using, leveraging what you are already able to do.
17
18 JIAQIANG: Uhm-hm.
19
20 UC: So, um, I mean, first thought that comes to my mind is
21 basically what you were saying: recreate what you've done
22 in Beijing here. Leveraging my contacts, you would have to
23 give us some direction as to, like, who we should start
24 targeting, and like kind of like what the service would be, but,
25 um, you know, if that was something that you'd be interested
26 in, I could start talking to Rog more about that prospect as
27 well.
28
29 JIAQIANG: Um, yes, um, because we have just tested and it's okay,
30 and, er, in China, and I think it should be okay in US.
31
32 UC: What do you mean...?
33
34 JIAQIANG: Yeah, a, a, a....at least, er, I mean if this kind of form, this,
35 this kind of doing things...
36
37 UC: This platform, like?
38
39 JIAQIANG: Yes, the platform, and, uh, at least, er, I think it is stable and
40 all things can go smooth...
41
42 UC: Uhm-hm.
43
44 JIAQIANG: ...as in China.
45
46 UC: Uhm-hm.

1
2 JIAQIANG: And I think, um, it should be okay in US.
3
4 UC: Uhm-hm. What are your concerns?
5
6 JIAQIANG: Um, but, the concern is the, the market. I, I in market
7 aspect. You know, we, we need to have those, kind of,
8 customers...
9
10 UC: Uhm-hm.
11
12 JIAQIANG: ...who can, you know, who can trust in the platform.
13
14 UC: Uhm-hm.
15
16 JIAQIANG: That's not the technical part.
17
18 UC: Well, and that's, I think, where we come in, because we've
19 done business with these folks all along. If we can go back
20 to them and say, listen, we're starting up this new branch,
21 we're, we're doing this. We already have the bona fides;
22 they already trust us. I think that's been established. It's just
23 we...the thing is: I don't want to deliver them a bad product.
24 Like, it would have to be solid, stable platform where...
25
26 JIAQIANG: Yes.
27
28 UC: ...when they use it, they know that they're getting the service
29 that they're asking for. Because a lot of these companies
30 don't wanna manage their own storage. They're gonna want
31 to leverage, you know, the experts, *i.e.* you, to do this kind of
32 stuff, so, but we would have to build all that, haha, you know
33 what I mean? And how, like, how long would that take for us
34 to build, kind of recreate what you've done there, here?
35
36 JIAQIANG: Hm.... Um, between two half....um, thing is, actually, just to
37 recreate it is, it's, it's not much work to do, but we need to
38 some guys, uh, you know, in, in the States to do, for
39 example, to do installations.
40
41 UC: Uhm-hm.
42
43 JIAQIANG: Or to do operations.
44
45 UC: Right.
46

1 JIAQIANG: And things like that. To, for example, to go to the data
2 centers, to install things, and to establish the [U/I] and install
3 their softwares...
4
5 UC: Uhm-hm.
6
7 JIAQIANG: ...that's, we need to, I mean, have some guys.
8
9 UC: Okay.
10
11 JIAQIANG: Locally.
12
13 UC: That would live here. You can't do that remotely.
14
15 JIAQIANG: Um, actually, we can do it remotely, but, but still, still there's
16 some guys here needs to assist us with some of their, you
17 know, their network system, network environment
18 [U/I]...the...they, in, in their data centers, they are, they are
19 prohibited for their, you know, the outer access into that, so,
20 yeah, so we...
21
22 UC: Oh, so we need physical access is what you're saying?
23
24 JIAQIANG: Uh, no. Just, I, I just, what I just mean is that, um, some of
25 their network they have restrictions in some companies.
26
27 UC: Oh.
28
29 JIAQIANG: You, you know. You can go, you can have some people go
30 to their data centers and do, and, er, install things, and
31 establish things internally.
32
33 UC: Uhm-hm.
34
35 JIAQIANG: But, they do not, they do not allow, you know, their out
36 connections...
37
38 UC: Oh.
39
40 JIAQIANG: Yes.
41
42 UC: You can't SSH in, or something like that.
43
44 JIAQIANG: Yes, yes. But if we can, can access it, it's okay.
45
46 UC: Oh, I see.

1
2 JIAQIANG: But we, you know, we, but we have a lot of customers in
3 China, that's, for example, the militaries, military customers.
4
5 UC: You have military customers?
6
7 JIAQIANG: Yes.
8
9 UC: Oh, okay.
10
11 JIAQIANG: That's...
12
13 UC: And they're using all that big data also then? Or that, that
14 system that you built?
15
16 JIAQIANG: Yeah.
17
18 UC: Oh, I see. That's good, though, because, like, on top of [ph]
19 Rog, I think it gives him, it'll give him some idea of what
20 you've already done with it. Like the fact that you've done
21 something with the Health Administration, which is a
22 massive entity in China. You've done stuff with the military.
23 Like, we could theoretically try to start trying to do that here
24 and start targeting those markets, because we have done
25 government contracts before, and, um....
26
27 JIAQIANG: Yes. So you, you have customers already used to a
28 system...
29
30 UC: Yes.
31
32 JIAQIANG: ...so they trust you, and, and later you recommend
33 something to them, they, they, they, they trust, you know,
34 they trust your product.
35
36 UC: Right. Hm...
37
38 JIAQIANG: That's [U/I].
39
40 UC: So, within the last six months you were able to get the
41 health, health organization as well as the military on board?
42 Is that through your, your, your, your friend? I forgot what
43 his name was. Tao, or whatever?
44
45 JIAQIANG: Tao. Uh, um, we, you know, we have a lot of, um, we have
46 ten people, uh, for, for technical part....

1
2 UC: Hm.
3
4 JIAQIANG: ...we got ten people, we have operations, you know. It's not,
5 it's not a thing, you know, it's nothing for two or three people
6 can do it. It's a huge thing, you know...
7
8 UC: Uhm-hm.
9
10 JIAQIANG: ...it has all kinds of people, they do their, do their work.
11 They do installations; they do, uh, sales; they do operations;
12 and...
13
14 UC: Oh, I see.
15
16 JIAQIANG: ...they do technical answering the emails, do technical [U/I],
17 and I guarantee their, uh, their [U/I]...
18
19 UC: Gotcha.
20
21 JIAQIANG: ...yeah, so it's....
22
23 UC: So your technical team, all they're doing is focusing on that
24 IBM GPFS code. And then you have people marketing it.
25
26 JIAQIANG: Uh, no, not all of them...
27
28 UC: Oh, I see.
29
30 JIAQIANG: ...because we have other things, because it, you know, it's
31 a, uh, what we did is, uh, is a platform to provide, provide
32 cloud computing. So, so storage is just one layer, so we
33 have people doing digital [U/I]...
34
35 UC: Oh, I see.
36
37 JIAQIANG: And, er, the, and a platform to manage the cloud, you know,
38 to manage all of the virtual machines [U/I]...
39
40 UC: Uhm-hm. That's a huge undertaking, too.
41
42 JIAQIANG: Yes, yes.
43
44 UC: And does that all tap in to the, the, um, the big data that,
45 that, that...
46

1 JIAQIANG: You can't, you can't, you can't, you can't install any kind of
2 big data, for example, [U/I] on top of, on top of the platform.
3
4 UC: Uhm-hm.
5
6 JIAQIANG: Because we provide the virtual machines...
7
8 UC: Uhm-hm.
9
10 JIAQIANG: You can install that. Yeah.
11
12 UC: So, hm, that's interesting.
13
14 JIAQIANG: It works, yeah.
15
16 UC: Like, I'm sure there are standards that we have to meet. I,
17 I'd have to look into it. I haven't worked with the government
18 in terms of like contracts, or, but I'm sure there would be
19 standards we would have to meet in order to store their
20 information. I imagine you had to do something like that,
21 too, right? Like in China. Like there's probably restrictions
22 to make sure it's secure. Like would you have to articulate
23 what you would do to secure it so that you could acquire
24 those contracts? Like how does that work?
25
26 JIAQIANG: What do you mean? To secure...?
27
28 UC: Like, for example, I, I was recently reading about Amazon,
29 and their cloud computing. And I guess they now have built
30 a platform that has been blessed by US government for us to
31 store information on there. So like I imagine you kind of had
32 to go through something similar. Is that what you guys had
33 to do in your company? Like, I doubt the government would
34 be like, we're just gonna put our data on there. You
35 probably had to articulate the methods, or, or what you've
36 done to ensure the fact that it, you know, it's gonna be
37 secure.
38
39 JIAQIANG: Um, I, I, I know what you mean. Um, actually, um, it,
40 actually we did not enable that. Because, you know, in [U/I],
41 it has features to, to do encryptions.
42
43 UC: Oh, encryption. Gotcha.
44
45 JIAQIANG: Yes, yes. But we, but, but for, because, you know, what our
46 customers, currently they, they just use, use it as a private

1 cloud instead of the public cloud.
2
3 UC: Oh. So that's...
4
5 JIAQIANG: So that's different.
6
7 UC: ...it's sort of like security because it's...
8
9 JIAQIANG: Yes, it's internally.
10
11 UC: [U/I].
12
13 JIAQIANG: That's the thing.
14
15 UC: Gotcha. That makes sense, okay. Well this is good. You
16 know, like, I do want you to meet with Rog and start talking
17 about this. Um, so I, I know this is a touchy subject, but, like
18 I wanna figure out compensation so like what we would be
19 getting ourselves into if we went down this path. Um, do you
20 have any thoughts on this at all?
21
22 JIAQIANG: Um, well I need to think about this.
23
24 UC: I understand, I understand.
25
26 JIAQIANG: Yeah. [U/I] talk with them...
27
28 UC: Do you...so, and he's staying here, and, and I told him I was
29 gonna meet with you this morning, just, just to chat, and
30 then, um, we were gonna meet with him briefly before we
31 went to the formal meeting. So maybe we'll just do that, give
32 you some time to kind of think this through a little bit, you
33 know? And, and see, you know, kind of come up with some
34 ideas and proposals. And maybe we can just kind of talk
35 with him a little bit more, just to give a ballpark idea. Like, I'd
36 like you to talk a little bit about what you're saying to him.
37 You know, like, basically what you did with the company
38 there, and what you did do here, you know, and why this
39 would be a value to us. Again, I mean, he's, he's, he's done
40 some pretty amazing things for us in terms of funding our
41 prior projects, so like, I've never had an issue with money
42 with him. Whenever I've asked, he's given to us. And we've
43 always returned on his investment, so he trusts us. He
44 trusts...by us, I mean me. [Laughs]. So... Are you still
45 hungry? You want something else, or...?
46

1 JIAQIANG: Uh, no.
2
3 UC: No, okay.
4
5 JIAQIANG: How long have you, have you been collaborating with, with
6 Rog?
7
8 UC: Oh, a few years now, yeah.
9
10 JIAQIANG: Few years.
11
12 UC: Yeah, yeah. We've known each other, um, we met up, I
13 guess it was maybe three or four years ago. Yeah, and um,
14 we've, we've had some, um, um, dealings but in the past. It
15 was small initially, but then he saw the potential. Especially
16 now with the cyber security and what we're doing with
17 Armorancap. You got people...the problem is is you see all
18 these hacks that are happening, you know, with like Target,
19 OPM, all that stuff, like, people out there are asking for these
20 services to protect their networks. So they want us to come
21 in, do audits, and that's why that company's growing very
22 quickly.
23
24 JIAQIANG: Yes.
25
26 UC: But we wanna create platforms now to start securing,
27 because they, these companies can't do it themselves. Like,
28 clearly, as you're seeing in the news, they're not doing a
29 good job. So...
30
31 JIAQIANG: Yeah.
32
33 UC: ...we're, we wanna get in that market where we actually can
34 secure their information so that it's better protected. So I
35 would like to talk to you more about the encryption piece of
36 GPFS, you were just mentioning it. It's probably something
37 we'd be interested in.
38
39 JIAQIANG: I, I see. So, that would be...[U/I] company...
40
41 UC: Uhm-hm.
42
43 JIAQIANG: So, for the..., so, so Rog is, is not a co-founder of that
44 company?
45
46 UC: He's the financier. He's the one who's, who's financing this

1 company.
2
3 JIAQIANG: Ah, financier.
4
5 UC: Your, your, your co-founders are gonna be Kim, and then
6 you're gonna meet Lawrence later on. And you...Kim is the
7 one who set up your trip to come here.
8
9 JIAQIANG: Yeah.
10
11 UC: Have you talked to her at all before? Has she reached out to
12 you...
13
14 JIAQIANG: Um, no.
15
16 UC: ...other than... okay. So, she's the one who arranged for
17 your, your trip here, um, and I've been working with them.
18 She's sort of, like, you'll meet her. She's got a great
19 personality, she can sell anything, so... [Laughter].
20
21 JIAQIANG: Oh. [Laughter].
22
23 UC: ...she's out there. She's got a lot of great contacts, and
24 she's been selling our services, and same thing with
25 Lawrence. My, my role is that when we pick, get these
26 projects, I then outsource a lot of this work and I coordinate.
27 I'm, I'm more of like a project manager, if you will, a lead. I
28 mean I used to do development. That was my background.
29 I did a lot of programming. Um, but now I'm getting more
30 into that, that managerial role, for this particular company.
31 Managing the project...because, at the end of the day, you
32 need somebody who's coordinating all these teams.
33 There's...
34
35 JIAQIANG: Yes.
36
37 UC: ...various aspects to it, so, um...
38
39 JIAQIANG: I, I, I understand.
40
41 UC: ...that's my role. And, plus, like, you know, I approached
42 them a while back about this, and then Rog, you know, I
43 used Rog in terms of funding it. So, and he, he funded the
44 company. And it, it's, it's taken off. So we're doing very well
45 right now. We have an office here in White Plains. I'm
46 never here, though. I'm traveling like meeting with clients

1 and everything else, so, yeah.
2
3 JIAQIANG: S..., okay, I see. You are not liv..., you do not live here.
4
5 UC: No I live in New York City, but I'm...
6
7 JIAQIANG: Oh.
8
9 UC: ...traveling a lot. I live down towards the City more, not up
10 here in White Plains. I come up here – it's not that far.
11
12 JIAQIANG: Yeah, yeah.
13
14 UC: It's an hour drive, but, um.... We have a lot of clients in the
15 City, so I spend a lot of time down there.
16
17 JIAQIANG: Oh.
18
19 UC: But then we have some on the west coast, um, in sort of
20 some of the Midwest states, too. So...
21
22 JIAQIANG: I see.
23
24 UC: So what do you like to do other than programming?
25
26 JIAQIANG: [Laughs].
27
28 UC: Or you just work all the time?
29
30 JIAQIANG: Um, actually, you know, um, sometimes I just, er, play, play
31 chess, or...
32
33 UC: Oh, you're a chess player?
34
35 JIAQIANG: [Laughs] Not very good.
36
37 UC: Are you good? [Laughter]
38
39 JIAQIANG: Not very good at that. And sometimes I do some exercises
40 and fitness [U/I], but not, not, but, you know, when I start up
41 a company a lot of things – too busy.
42
43 UC: Oh, you're too busy?
44
45 JIAQIANG: And, uh, previously I do some badminton.
46

1 UC: Oh, badminton.
2
3 JIAQIANG: Yeah. [Laughter]
4
5 UC: Okay. Alright, that's cool.
6
7 JIAQIANG: And, just things like this. But, you know, just, when start up
8 company, you...
9
10 UC: A lot of work.
11
12 JIAQIANG: ...huge...yeah, quite a lot of work.
13
14 UC: [Laughs] I know. I have no personal life. All I'm doing is
15 traveling and meeting with clients. I hear ya.
16
17 JIAQIANG: You know, yeah. I also did quite a lot of traveling in China,
18 you know, [U/I]...
19
20 UC: Before the start-up?
21
22 JIAQIANG: Yeah, before the start-up. Especially we, um, especially at
23 the starting three months, because we did not hire the pre-
24 sales person.
25
26 UC: Oh.
27
28 JIAQIANG: But, but now we have two pre-sales. So they can just travel
29 in...
30
31 UC: Oh, really?
32
33 JIAQIANG: Yeah.
34
35 UC: How many clients do you guys have?
36
37 JIAQIANG: Uh, lot, I think.
38
39 UC: Oh.
40
41 JIAQIANG: We just, er, we, we do some...we just, we just do some, uh,
42 promotions and in several cities in China...
43
44 UC: Uhm-hm.
45
46 JIAQIANG: ...to promote product.

1
2 UC: Uhm-hm.
3
4 JIAQIANG: And a lot of people are very interested.
5
6 UC: They're interested?
7
8 JIAQIANG: Yeah, very interested.
9
10 UC: Oh. Do you have a lot of people signed up already, or just a
11 few?
12
13 JIAQIANG: Um, they, a lot of, a lot of customers has already tried. They
14 are trying, you know, they are, they are using it.
15
16 UC: Oh, they are?
17
18 JIAQIANG: Yeah.
19
20 UC: But they're going through a trial phase at this point...
21
22 JIAQIANG: Yeah, yeah.
23
24 UC: ...to see if they like it?
25
26 JIAQIANG: Yeah.
27
28 UC: Kind of like what the university is doing?
29
30 JIAQIANG: Uh, universities and enterprises.
31
32 UC: Enterprises?
33
34 JIAQIANG: Yes.
35
36 UC: Do you, but do you, do you already have it signed up a lot of
37 the contracts or no?
38
39 JIAQIANG: Uh, yes.
40
41 UC: Oh, you do?
42
43 JIAQIANG: Uh, one...two hundred, two hundred, two million, yeah.
44
45 UC: Two million contracts?
46

1 JIAQIANG: No, no. I mean two million, um, income.
2
3 UC: Oh, income.
4
5 JIAQIANG: Yeah, yeah.
6
7 UC: Oh, I see.
8
9 JIAQIANG: Yeah, two million US dollars.
10
11 UC: Wow – that's good.
12
13 JIAQIANG: Yes.
14
15 UC: And part of that's from the health, that health organization?
16
17 JIAQIANG: Yeah.
18
19 UC: And the military?
20
21 JIAQIANG: Yeah. For that contract it's about, uh, twenty, thirty, yeah,
22 thirty, uh, thirty...one three million? Yeah.
23
24 UC: One point three million?
25
26 JIAQIANG: Yeah for that, for that contract, yeah.
27
28 UC: I imagine the military contract's probably pretty lucrative, too.
29
30 JIAQIANG: That's, um, that's a lot, and, er, and we did some...in the
31 military we do, help them to build up a system to, for, for, for
32 H...HPC, the high performance computing.
33
34 UC: Oh.
35
36 JIAQIANG: They utilize the GPUs to...
37
38 UC: Got ya.
39
40 JIAQIANG: ...do, to do parallel, parallel...
41
42 UC: Parallel computing?
43
44 JIAQIANG: Yes. And, er, they need a system that is, they need a
45 storage system they, they have, uh, ten thousand, ten
46 thousand millions of files.

1
2 UC: Wow.
3
4 JIAQIANG: Wow. It's very huge. And, uh...
5
6 WAITER: [U/I] plates?
7
8 UC: Oh, thank you.
9
10 JIAQIANG: ...most of them are s..., are small files.
11
12 UC: Yeah.
13
14 JIAQIANG: And then you, and, er, they provide files to, to, to GPU and
15 to do parallel compu...computing, and, er, they need a
16 storage system that quick en...quickly enough. Otherwise
17 the GPU need to wait for their...
18
19 UC: Oh.
20
21 JIAQIANG: ...storage to...
22
23 UC: So there'd be a lag?
24
25 JIAQIANG: Yes. So, um, they want to utilize their network, the infinite
26 band network.
27
28 UC: Uhm-hm.
29
30 JIAQIANG: That's, er, that's much faster than their ten gigabytes or,
31 yeah, so...
32
33 UC: So then it uses that GPFS system in order to have those fast
34 read-writes?
35
36 JIAQIANG: Yes, because GPFS can, can utilize their infinite band.
37
38 UC: Oh, I see.
39
40 JIAQIANG: Because that's a, yes, that's a reason why [U/I].
41
42 UC: That's really good.
43
44 JIAQIANG: Yes.
45
46 UC: You've done well.

1
2 JIAQIANG: So, because it is designed for, for high-performance
3 computing and super computers, so that's the reason, so
4 has good performance.
5
6 UC: Uhm-hm.
7
8 JIAQIANG: So, I think a lot of things can be done.
9
10 UC: Yeah. [Voices overlap]. I think there's some, a lot of
11 opportunities here. I like this idea of maybe recreating what
12 you've done here. I mean it's really no skin off your back,
13 right? Because, like, you've already done it, you know?
14
15 JIAQIANG: Yes.
16
17 UC: It's just a matter of recreating it here...
18
19 JIAQIANG: At least the technic part is okay.
20
21 UC: Well we got resources for everything else, like...
22
23 JIAQIANG: Yes, so I think it's, it should be okay for us.
24
25 UC: Uhm-hm.
26
27 JIAQIANG: Yeah.
28
29 UC: Is your, does your fiancé work with you guys, or does she do
30 something else?
31
32 JIAQIANG: [Laughter] No, she, she is work, working in some other
33 company in, yeah, do some scientific instrument things,
34 yeah.
35
36 UC: Oh, is she a researcher, or...?
37
38 JIAQIANG: Uh, uh, presales.
39
40 UC: Oh, sales, gotcha.
41
42 JIAQIANG: Presales.
43
44 UC: Presales?
45
46 JIAQIANG: Knows some technical things...

1
2 UC: Hm.
3
4 JIAQIANG: ...and, yeah.
5
6 UC: Okay.
7
8 JIAQIANG: And help the sales to...
9
10 UC: [Laughter]
11
12 JIAQIANG: Yeah.
13
14 UC: Alright so it's, it's ten o'clock right now, ten fifteen, um,
15 would... I'm sorry were you gonna say something?
16
17 JIAQIANG: Uh, so we are going to meet with them in afternoon?
18
19 UC: Yeah, around two o'clock.
20
21 JIAQIANG: Oh.
22
23 UC: [To WAITER] Thank you. [To JIAQIANG] Um, but I would
24 like to meet with Rog first.
25
26 JIAQIANG: Okay.
27
28 UC: So, um, do you wanna go get cleaned up? And then we'll
29 have a meeting with Rog, and then we can meet with these
30 guys? Like what time do you thi...how much time do you
31 think you would need?
32
33 JIAQIANG: It's okay. I...It's okay, I just, uh, bring the bag [U/I].
34
35 UC: Is...um, just out of curiosity, is, is all the coding stuff on your
36 laptop there, or do you have it somewhere else?
37
38 JIAQIANG: Uh, it's, yeah, in the laptop.
39
40 UC: It's on your laptop? Okay.
41
42 JIAQIANG: ...do demonstrations.
43
44 UC: So you could actually show it to him if we, if we wanted to?
45
46 JIAQIANG: Yeah, yeah, yeah.

1
2 UC: Okay, cuz I haven't shown him the servers yet. I showed my
3 team – they were looking at it, but it'd be kind of...he's a
4 visual guy, like it would be helpful for you to kind of...
5
6 JIAQIANG: Yes.
7
8 UC: ...demonstrate some of this stuff. Um, do you wanna try for
9 like eleven o'clock? That's give you like forty-five minutes?
10
11 JIAQIANG: Okay.
12
13 UC: And you can kind of relax and...if you want you could clean
14 up. You don't need to if you don't want to.
15
16 JIAQIANG: [Laughter]
17
18 UC: Like, later on we'll meet with the bosses, so it's up to you
19 what you want to do.
20
21 JIAQIANG: Eleven o'clock? It's okay.
22
23 UC: So, then, like forty-five minutes or so?
24
25 JIAQIANG: Yeah.
26
27 UC: Okay, alright, well why don't we do that? Um, why don't we
28 plan on meeting, I'll be right in this area around eleven.
29
30 JIAQIANG: Okay.
31
32 UC: How's that? Will that work for you?
33
34 JIAQIANG: Yeah, it's okay.
35
36 UC: Ah, I'm very excited. [Laughter]. This is good, so...alright,
37 well why don't you go, you know, relax for a little bit, and, uh,
38 I'll give him a call. He's in the area, so it won't be that hard
39 to set this up, and then, uh, we'll just meet down here at
40 eleven.
41
42 JIAQIANG: Okay.
43
44 UC: Alright?
45
46 JIAQIANG: Okay.

1
2 UC: Alright, great. I'll see you in a little bit, then, okay?
3
4 JIAQIANG: [U/I].
5
6 UC: Alright, don't forget your coat there.
7
8 JIAQIANG: See ya.
9
10 UC: Alright, so long, thank you.
